Quick Start Guide

CAUTION! Always use care and wear appropriate PPE when working with chemicals!

Install Controller

- A. Position unit and attach mounting feet.
- B. Mount and connect to power source.
- C. Connect Ethernet or Cell-POE device if applicable.

Record Sensor Information

- A. Open the IVX Signal Converter
- B. Using the info-graph inside the cover identify the Sensor ID #
- C. If multiple sensors are to be configured with the IVX unit, each ID must be unique.
- D. To aid in configuring later, record the following information for each Sensor:
 - Sensor ID # Check DIP Switch inside cover
 - Container Name
 - Container Height
 - Container MAX Volume
 - Current Volume Amount

110

VAC

Install Sensors

- A. Position Sensor in container:
 - Pressure: Lay on bottom of container or suspended if susceptible to debris. Tighten cord grips on cap to stabilize cord length.
 - Ultrasonic: Position at top of container, perpendicular to liquid, and away from any obstructions.
- B. If the Container is equipped with a 2in. NPS opening the included cap can be used to attach and secure the sensor into position.

4 Connect Sensors

- Connect Sensors in a daisy-chain fashion via the IVX Signal Converter using the orange M12 Cable(s).
- B. Hand tighten the M12 cable connections, then two more clicks using a wrench.
- C. When Sensors are connected Green Lights will indicate it is receiving power and signal.
- D. Connect the port cap to the final sensor's cable to seal and complete the chain.
- E. Terminate the final Signal Converter in the chain via the single pole DIP switch labeled TERM (To Terminate: Flip from 1 to ON)

IVX-BETA

Quick Start Guide

CAUTION! Always use care and wear appropriate PPE when working with chemicals!

Clean Intel - Add Sensors

- A. Go to **cleanintel.com**, login as an administrator and select **IVX**.
- B. Open the Sensors page
- C. Click New +
- D. Enter Sensor details and Save

Calibrate

- A. From the **Containers** page, select a linked Container and Sensor configuration
- B. Click Calibrations
- C. Click Add a Calibration Point and enter:
 - **Sensor Reading:** The raw 4-20mA reading from the sensor
 - Volume: Amount at specified Sensor Reading
- D. Save and repeat for a 2nd Calibration point
- E. For more information on Sensor Specific calibration protocols please reference pages 14-15 of User Manual.
